

FABIUS LIGHTING

GU10 LED Downlight

LED BULB : MAX 7W

HALOGEN : MAX 25W

Important information:

The lamp must be installed by an authorised electrician. Check that the label on the lamp matches the utilised voltage and also check the method of installation and area.

Always remember to disconnect from the mains before installing the lamp. Never exceed the wattage label on the lamp. Make sure that the light source is correctly positioned in the socket.

The lamp is approved for additional cabling.

Installation instructions:

Check that the lamp is approved for the actual location where the lamp will be mounted.

If possible, test the cup drill on similar material first to ensure that the finished hole has the correct diameter.

Then check that there are no water pipes or cables where the hole is going to the nearest surface (tall cup-boards, etc.)

must be at least 50cm.

Step 1

Drill the hole in the ceiling \varnothing 77mm.

Step 2

Place the packing ring in the middle of the hole on the vapour barrier.

Step 3

Pull the cable/pipe down to the lamp and connect the wire.

Step 4

Mount the safety box in the ceiling and screw firmly in place with Torx T10. When using an electric screw-driver, use the lowest torque.

Step 5

Fit the Downlight Front into the light source.
